

Addressing Risk Factors for
Noncommunicable Diseases Among
Young People in Africa: Key To Prevention
and Sustainable Development

DATA APPENDIX

ACKNOWLEDGMENTS

This data appendix was produced by Toshiko Kaneda, Ph.D., senior research associate at Population Reference Bureau (PRB). The author thanks Carolyn Lamere, program assistant, and interns Adriana Zinn, Heather Zaccaro, and Adaeze Exeofor at PRB for their assistance with data.

This publication was funded by the AstraZeneca Young Health Programme (YHP). YHP is a partnership among AstraZeneca, Johns Hopkins Bloomberg School of Public Health, and Plan International, with local NGO partners also implementing YHP programs on the ground. The YHP mission is to positively impact the health of adolescents in marginalized communities worldwide through research, advocacy, and on-the-ground programs focused on NCD prevention.

Data Appendix to Addressing Risk Factors for Noncommunicable Diseases Among Young People in Africa: Key to Prevention and Sustainable Development

This data appendix provides all the data points underlying the noncommunicable diseases (NCD) risk-level coding for young people across North and sub-Saharan Africa presented in the accompanying data sheet, *Addressing Risk Factors for Noncommunicable Diseases Among Young People in Africa: Key to Prevention and Sustainable Development*, and policy brief, *Noncommunicable Diseases in Africa: Youth Are Key to Curbing the Epidemic and Achieving Sustainable Development*. The data appendix provides the data description for each of the 52 countries, including source, data year, age, and size of the sample per data point.

Data points presented for each risk factor are for the indicators listed below. When the indicator definitions differ from those listed below, they are specified in the data description.

TOBACCO USE:

Cigarettes: Percent smoking cigarettes in the past 30 days

Other tobacco products: Percent using other tobacco products in the past 30 days

Any products: Percent using any tobacco products in the past 30 days

ALCOHOL USE:

Percent having any drink containing alcohol in the past 30 days

PHYSICAL INACTIVITY:

Percent NOT engaging in physical activity for at least 60 minutes per day on five out of the last seven days. In some countries, the measure pertains to seven out of the last seven days, which is indicated as “7 day cut-off used” in the data description. In some countries, a Global Physical Activity Questionnaire (GPAQ) developed by WHO was used to measure physical activity levels and is indicated as such. Surveys usually report physical activity levels rather than inactivity levels, so data presented here are 100 percent minus the percent reported to be physically active.

OVERWEIGHT:

Percent overweight or obese. Different surveys use different standards to classify overweight status.

When no definition appears in the data description, overweight status is classified as Body Mass Index (BMI) greater than 25kg/m². When “BMI>+1SD” appears in the data description, overweight status is classified using an alternative indicator, BMI greater than one standard deviation from the median for BMI for age and sex.

The most recent data available with sizable samples (400 or larger with a few exceptions) are displayed. All the data presented are from 2004 or later.

*(Asterisk) next to the risk factor name in the data description indicates subnational data. The name of city/region where data are collected appears in the data description. When subnational data are available from multiple locations, data for the national capital or the largest city/region for which data are available are presented.

The age groups in the data are 13-to-15-year-olds for tobacco use, alcohol use, and physical inactivity, and 15-to-19-year-olds for overweight/obese status. As in the data sheet, when data are not available for these age groups, data for the age groups closest to the data are presented to facilitate comparison.

Acronyms for data sources:

GYTS *Global Youth Tobacco Survey*, World Health Organization (WHO) and Centers for Disease Control (CDC)

GSHS *Global School-Based Student Health Survey*, WHO and CDC

STEPS STEPwise approach to chronic disease risk factor surveillance, WHO

DHS *Demographic and Health Surveys*, ICF International

Global Youth Tobacco Survey (GYTS) and *Global School-Based Student Health Survey* (GSHS) are both school-based surveys. *Demographic and Health Surveys* (DHS) and *STEPS* are both household surveys. Types of surveys for other data sources appear in the data description per survey.

For full citations, see Data Sources, page 21.
