Continued

Key

The total fertility rate (TFR) is the average number of children a woman would bear in her lifetime if the rate of childbearing of a particular year remained constant.

TFR's in normal typeface were taken from official online or printed publications and databases of national statistical offices.

TFR's in lightface were taken from secondary sources such as the Council of Europe.

TFR's in *lightface italic* are PRB estimates based on officially reported births for the year.

TFRs in **red** have been updated since the first release of this table on August 26, 2009.

— Data not available.

Notes

Rates for Moldova exclude Transdniestria and Bender.

Rates from 2000 to 2006 for Belgium are official estimates.
